DETAILED ACTION

Response to Arguments

Applicant's arguments filed 7/28/08 have been fully considered but they are not persuasive. Applicant argues that the Japanese reference (Norihiro) does not specify that Te is not included in the recording material. However, as stated in the previous Office Action, the reference discloses that the recording material can be GaInSb having the claimed amount of antimony. This alloy does not include tellurium. The reference does teach a recording material that does not include tellurium. The reference also teaches recording materials that do include tellurium, but this does not mean that all the teachings of the reference can be ignored. The recording material as claimed is disclosed and therefore, the rejection is maintained.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-2 and 5-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 60-177446 in view of US 5,914,214.

The '446 reference disclosed the recording material as claimed. See p. 266. The '214 reference is relied upon to show that the additional layers, such as multiple dielectric layers and a reflective layer, are known in phase-change recording media. Specifically, these layers are known in

phase-change recording media having GaInSb recording layers. See the previous office Action and Response above. The '214 reference discloses that it is known to use a layer of nitride, carbide, etc. between the recording layer and the dielectric protective layer to protect the thermal properties of the dielectric layer. See col. 8. For layer thickness, see Example 2.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
